Q4

Online Login System ♦ Multiple Exceptions

25
marks

Problem Statement:

Develop a Java program to simulate an online login system. The program should validate a username and password and perform operations that may generate different exceptions.

Requirements:

Accept login details.

Use try-catch-finally.

Handle at least two different built-in exceptions.

Display a message indicating whether the login operation was successful.

Ensure the finally block executes.

Your Code

```
1 import java.util.Scanner;
2
3 public class Main {
4     public static void main(String[] args) {
5
6         Scanner sc = new Scanner(System.in);
7
8         try {
```

```
9         String username = sc.nextLine();
10        String password = sc.nextLine();
11
12        if (username.equals("")) {
13            throw new IllegalArgumentException
14        }
15
16        if (password.length() < 6) {
17            throw new IllegalArgumentException
18        }
19
20        if (username.equals("admin") &&
21            System.out.println("Login su
22        } else {
23            throw new Exception("Invalid
24        }
25
26    } catch (IllegalArgumentException e)
27        System.out.println(e.getMessage(
28
29    } catch (Exception e) {
30        System.out.println(e.getMessage(
31
32    } finally {
33        System.out.println("Finally bloc
34    }
35 }
36 }
```
